2. The application has been amended as follows:

In the claims:

I. In claim 1:

a) line 10, delete "and";

b) line 16, replace "." with – ,

wherein the asynchronous transmission channel comprises a forward channel forwarding data from the local data processing device to the remote data processing device and a reverse channel forwarding the data from the remote data processing device to the local data processing device, wherein the forward channel and the reverse channel are not synchronized with each other. –

II. In claim 9:

a) line 2, replace "predefined parameters" with – user-specified parameter --;

b) line 3, replace "predefined parameters" with – user-specified parameter --.

III. In claim 11:

a) line 16, replace "." with – ,

wherein the asynchronous transmission channel comprises a forward channel forwarding data from the local data processing device to the remote data processing device and a reverse channel forwarding the data from the remote data processing device to the local data processing device, wherein the forward channel and the reverse channel are not synchronized with each other. –

IV. In claim 12:

a) line 2, after "parameter" in two locations, insert – user-specified – .

V. In claim 16:

a) line 2, replace "parameters" with –user-specified parameter --;

b) line 3, replace "parameters" with –user-specified parameter --.

VI. In claim 18:

a) line 13, replace "." with – ,

wherein the asynchronous transmission channel comprises a forward channel forwarding data from the local data processing device to the remote data processing device and a reverse channel forwarding the data from the remote data processing device to the local data processing device, wherein the forward channel and the reverse channel are not synchronized with each other. –

Art Unit: 2152

VII. Cancel claim 25.

VIII. In claim 26:

a) line 1, replace "claim 25" with – claim 1 --.

3. The following is an examiner's statement of reasons for allowance: None of the prior art in record taken alone or in combination discloses all the combined limitations including a system for transmitting data between a local data processing device and a remote data processing device through an asynchronous transmission channel for use with distributed objects in the field of automation technology, said system comprising: a memory assigned to the local data processing device for storing at least one user-specified parameter to identify a call sent by a first program of the local data processing device to a second program of the remote data processing device to solicit data from the second program of the remote data processing device; means for integrating the user-specified parameter into response data sent by the remote data processing device to the local data processing device; means for identifying the user-specified parameter in the response data; and means for synchronizing the response data such that by identifying the user-specified parameter in the response data, the response data of the second program of the remote data processing device is integrated into the first program of the local data processing device; and an asynchronous transmission channel transmitting data between the local data processing device and the remote data processing device, wherein the asynchronous transmission channel comprises a forward channel forwarding data from the local data processing device to the remote data processing device and a reverse channel forwarding the data from the remote data processing device to the local data processing device, wherein the forward channel and the reverse channel are not synchronized with each other.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. Pursuant to MPEP 606.01, the title has been changed to read:
